# WHAT'S WEB DEVELOPMENT?

GETTING STARTED

# OVERVIEW OF WEB DEVELOPMENT

## Basic Explanation

- Web development is akin to constructing a house online.
- A house requires architects, builders, and designers.
- Websites are built using specific codes and tools.

## Deep Dive

- **Frontend:** User-facing aspects on browsers.
- **Uses tools:** HTML, CSS, JavaScript, React.js.
- **Backend:** Hidden powerhouse for websites.
- Manages calculations, data, frontend functionality.
- **Uses Node.js** (JavaScript) and MongoDB.
- Both frontend and backend create functional sites/apps.

## Analogue

- Frontend: Restaurant's visible parts like design and menus.
- Dictates ambiance and dining feel.
- **Backend:** The behind-the-scenes kitchen.
- Chefs (**servers**) prepare dishes (web content).
- Storage of ingredients parallels data storage.

## Summary

- Web development: Art of creating websites.
- Two components: frontend and backend.
- **Frontend:** What users see and interact with.
- **Backend:** Powers and supports frontend.
- Frontend is the dining area of a restaurant.
- Backend is the kitchen, making everything happen.

# WHAT'S

# FULL-STACK

# DEVELOPMENT?

GETTING STARTED

# OVERVIEW

## FRONTEND

- **Languages:** HTML, CSS, JavaScript
- **Frameworks/Libraries:** React, Angular, Vue.js, jQuery
- **Tasks:** UI creation, styling, responsive design, user experience improvement, API communication.

## BACKEND

- **Languages:** Node.js, Java, Python, Ruby, PHP, C#
- **Frameworks:** Express.js (Node.js), Spring (Java), Django (Python), Ruby on Rails (Ruby), .NET Core (C#)
- **Tasks:** Server setup, API creation, database operations, data integrity, authentication, authorization.

FULLSTACK-DEVELOPER

# OVERVIEW

## Brief Overview

- Full-stack development: Combines front end and back end development.
- Full-stack developer: Skilled in both areas.
- Covers appearance, user experience, and functionality.
- Also works on server and database aspects.

## Analogue

- Frontend: Restaurant's visible parts like design and menus.
- Dictates ambiance and dining feel.
- Backend: The behind-the-scenes kitchen.
- Chefs (servers) prepare dishes (web content).
- Storage of ingredients parallels data storage.

## Deep Dive

- Frontend: User-facing aspects on browsers.
- Uses tools: HTML, CSS, JavaScript, React.js.
- Backend: Hidden powerhouse for websites.
- Manages calculations, data, frontend functionality.
- Uses Node.js (JavaScript) and MongoDB.
- Both frontend and backend create functional sites/apps.

## Summary

- Web development: Art of creating websites.
- Two components: frontend and backend.
- Frontend: What users see and interact with.
- Backend: Powers and supports frontend.
- Frontend is the dining area of a restaurant.
- Backend is the kitchen, making everything happen.

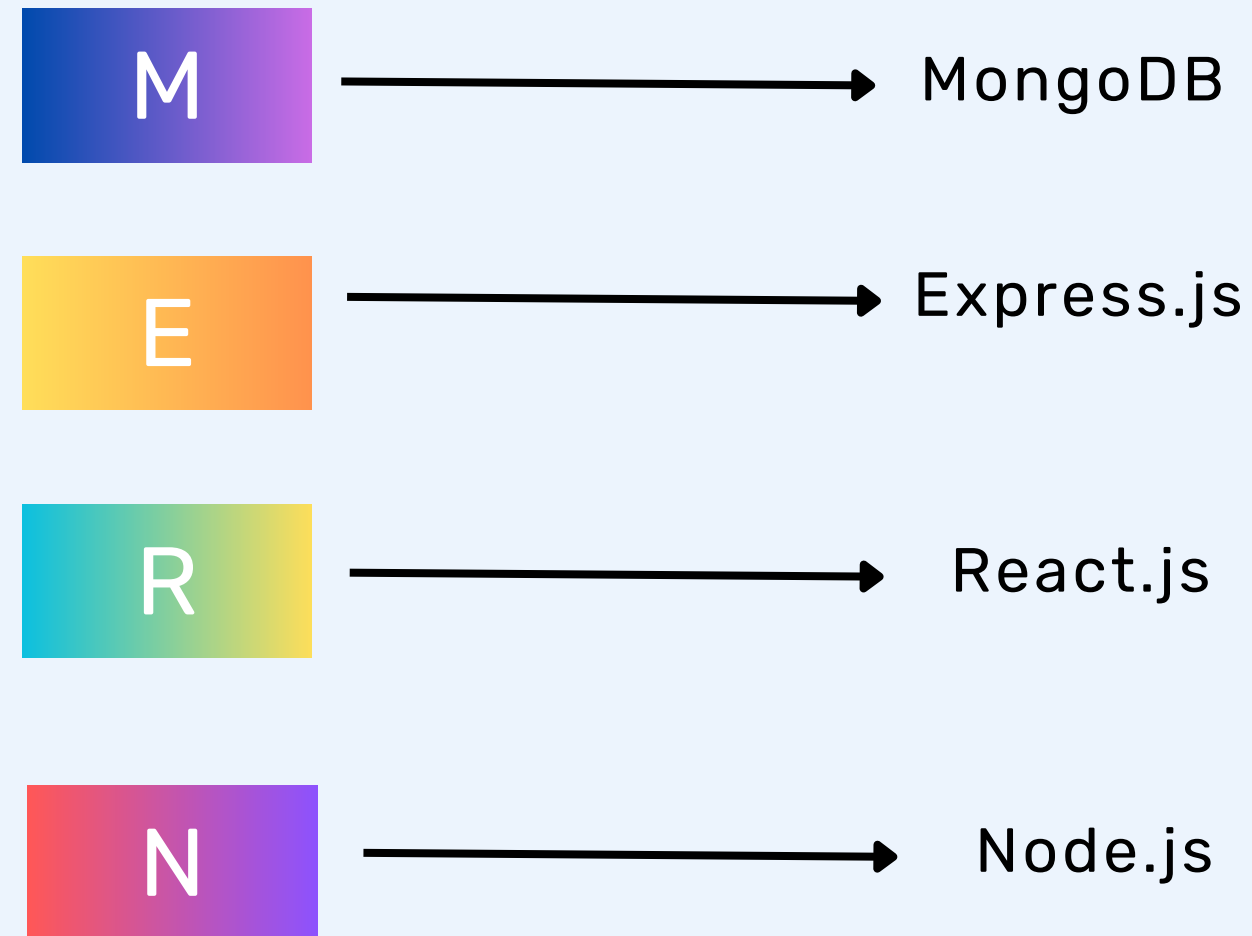

# WHAT'S MERN-STACK DEVELOPMENT?

GETTING STARTED

# OVERVIEW

# OVERVIEW

MONGODB

- **Type:** NoSQL Database
- **Description\*\*:** MongoDB stores data in JSON-like format, is scalable, and provides an intuitive alternative to relational databases.

Express JS

EXPRESSJS

- **Type:** Web App Framework
- **Description:** Express.js is a minimal Node.js framework for web apps, simplifying routing, API creation, and database integration.

REACT JS

- **Type:** Frontend Library
- **Description:** React.js (React) is a popular JavaScript library for building user interfaces, emphasizing reusability and efficient UI updates through a virtual DOM.

node

NODE JS

- **Type:** JavaScript Runtime
- **Description:** Node.js runs JavaScript on servers, excels in scalability with its asynchronous, event-driven nature. Express.js is built on Node.js.
